Computer programming and consulting

Descripción

The University Institute for Research in Multilingual Linguistic Technologies (IUITLM) is one of the centers of excellence dedicated to scientific and technical research of the University of Malaga, which aims, among others, to offer consulting, mediation and remote interpretation services and to develop linguistic software products.
The IUITLM has an interdisciplinary character, since it has groups from different branches of knowledge (Humanities, Information and Communication Technologies, Social Sciences, Economics and Law, Biology and Biotechnology, and Psychology).

Tipo de oferta

We are interested in establishing partnerships with companies that need to outsource IT consulting services related to multilingual language technologies, as well as collaborating with companies that require customized software development.

Productos

Multilingual language technology consulting.
– Language consulting
– Interlingual and intercultural mediation
– Remote interpreting
– Machine translation and machine interpreting
– User-adapted glossaries
– Ad-hoc software
Digital transition, humanities and multilingual localization consulting.
– Digital humanities software development (monolingual and multilingual)
– Digital switchover application development

Capacidades

Companies with digital transformation needs and software projects.
Companies requiring services related to multilingual language technologies.

Qué lo diferencia

Our proposal is based on the offer of services adapted to the needs of users. In addition, the services offered include the latest developments in research in this area, since a large part of IUITLM’s work is research in multilingual language technologies, as well as knowledge transfer.
